## STREAMLINED CONSTRUCTION DATA PROCESSING PIPELINE

In the long term, construction companies, which today dominate the market by setting price and service quality standards, may lose their role as the key intermediary between the customer and their construction project.

DataDrivenConstruction enables seamless automation and customization for any data-driven scenarios in your company. From CAD models to actionable insights, we transform your data into business value. Simplify processes, enhance efficiency, and let us tailor solutions to fit your unique needs.

data-driven  
construction.io

# DATA > SOFTWARE

The future of construction is **data-centric**

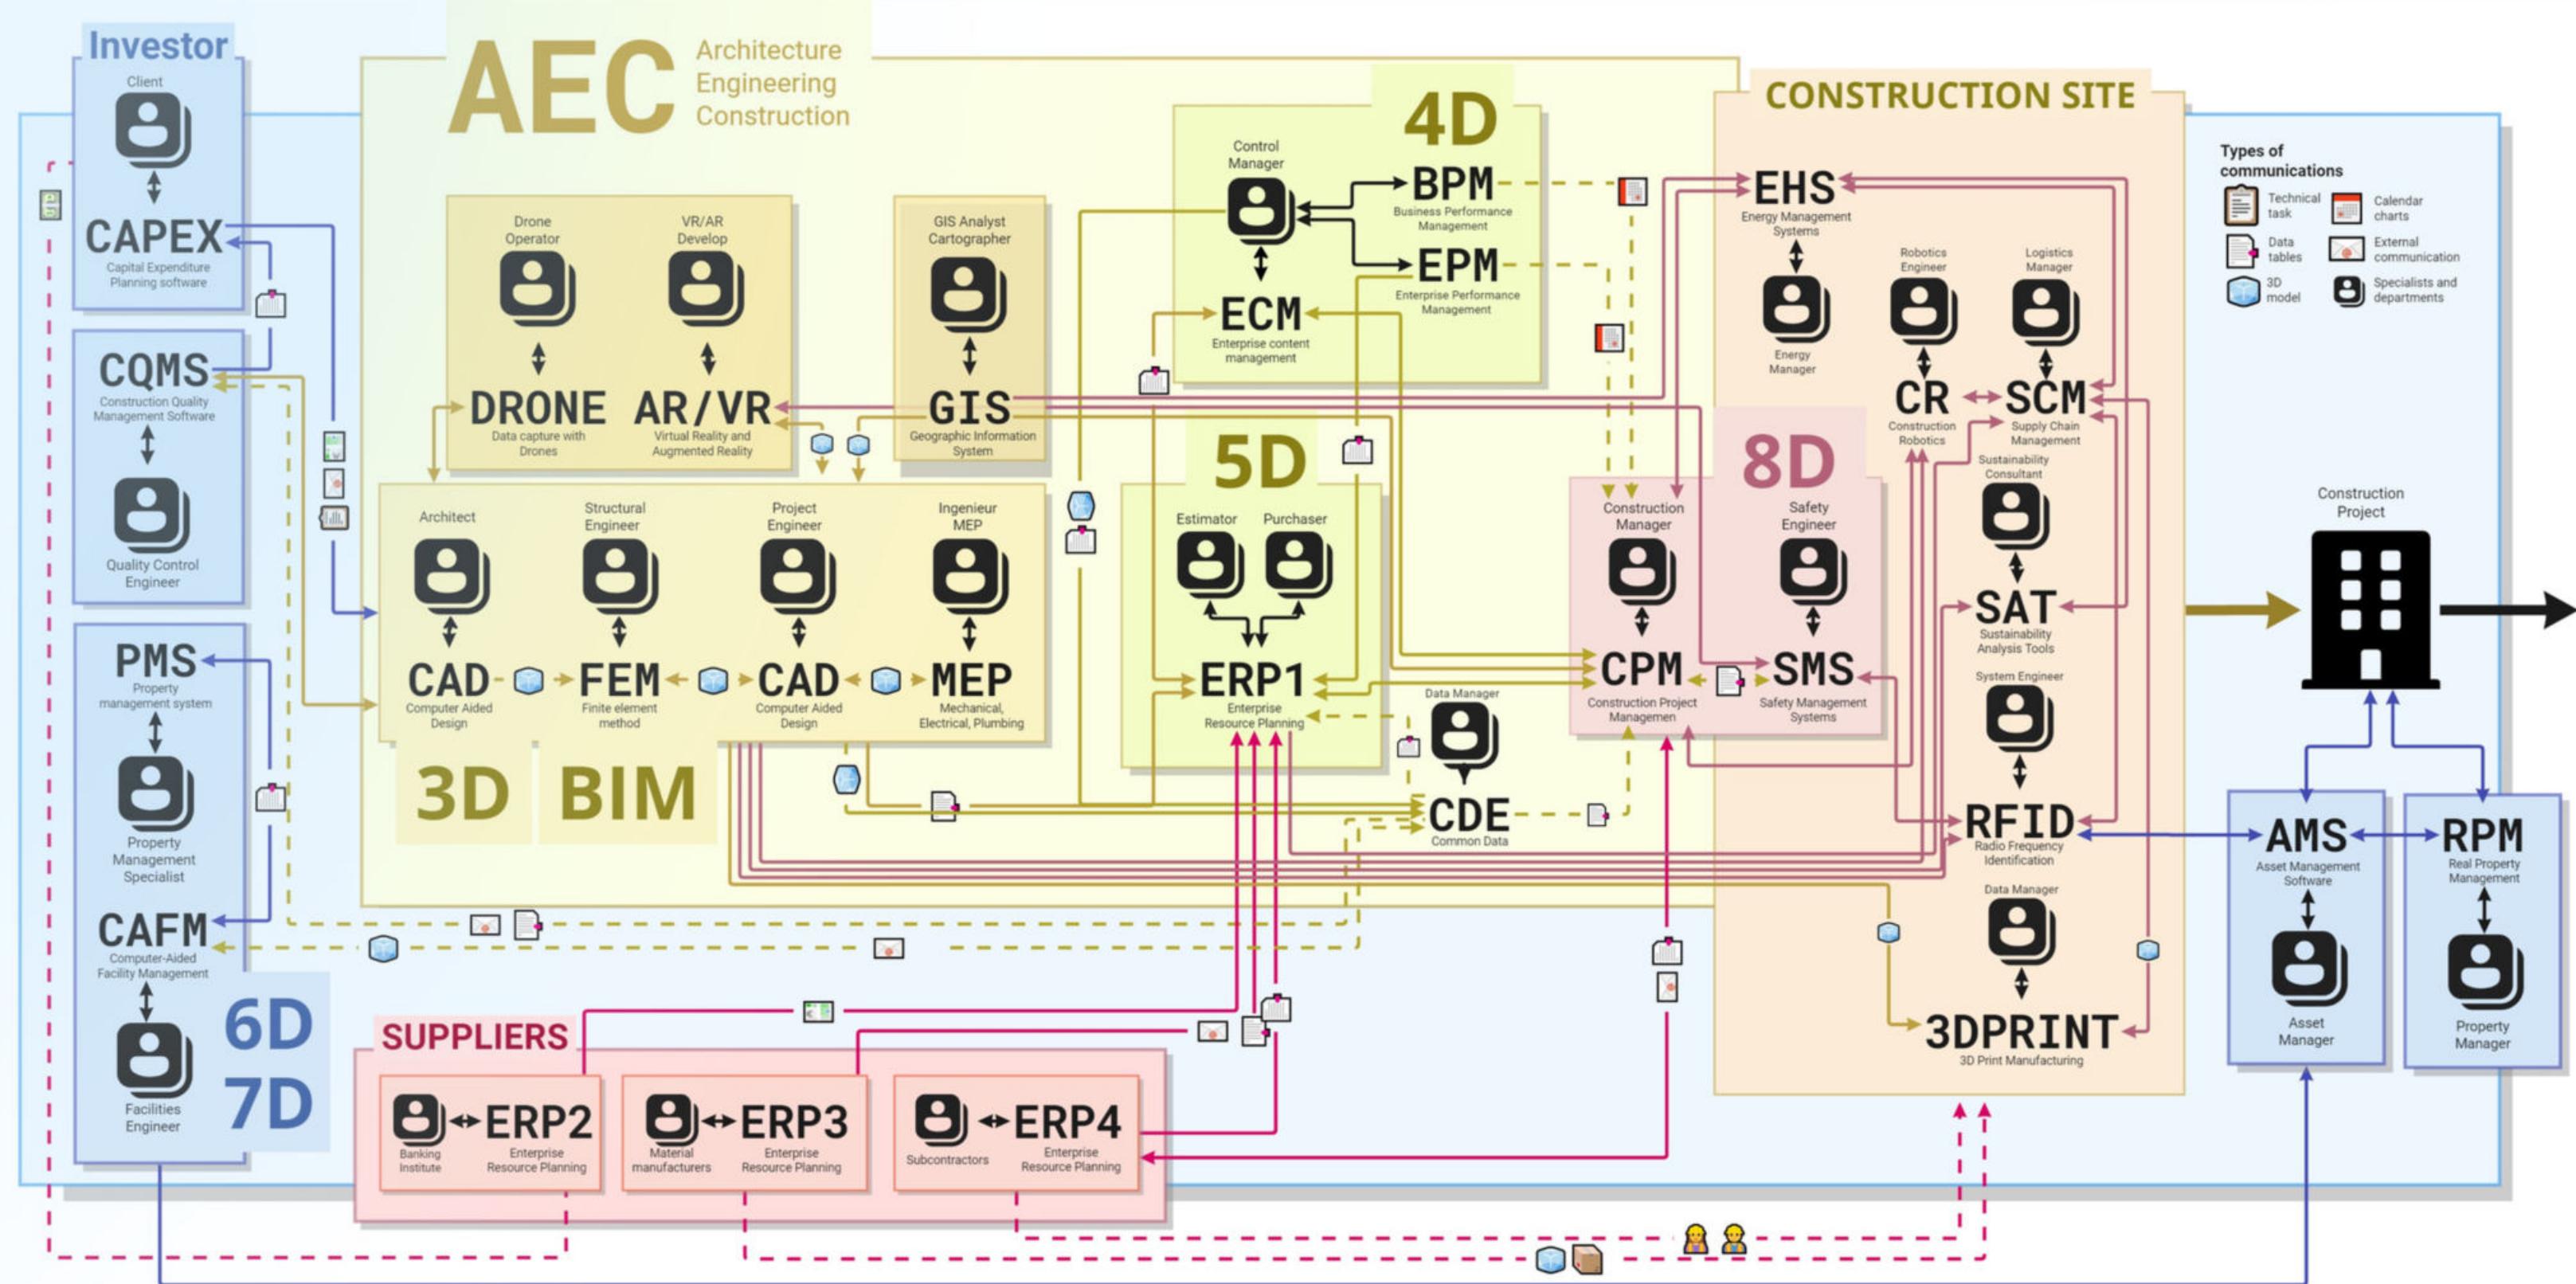

# [data-driven construction.io](https://data-drivenconstruction.io)

DataDrivenConstruction Toolkit is a powerful tool for exploring construction data without the need for an online connection or the installation of CAD (BIM) software. It supports the offline reading of CAD data and allows for the export of data to formats such as DAE, USD, CSV, Excel, JSON, XML, etc.

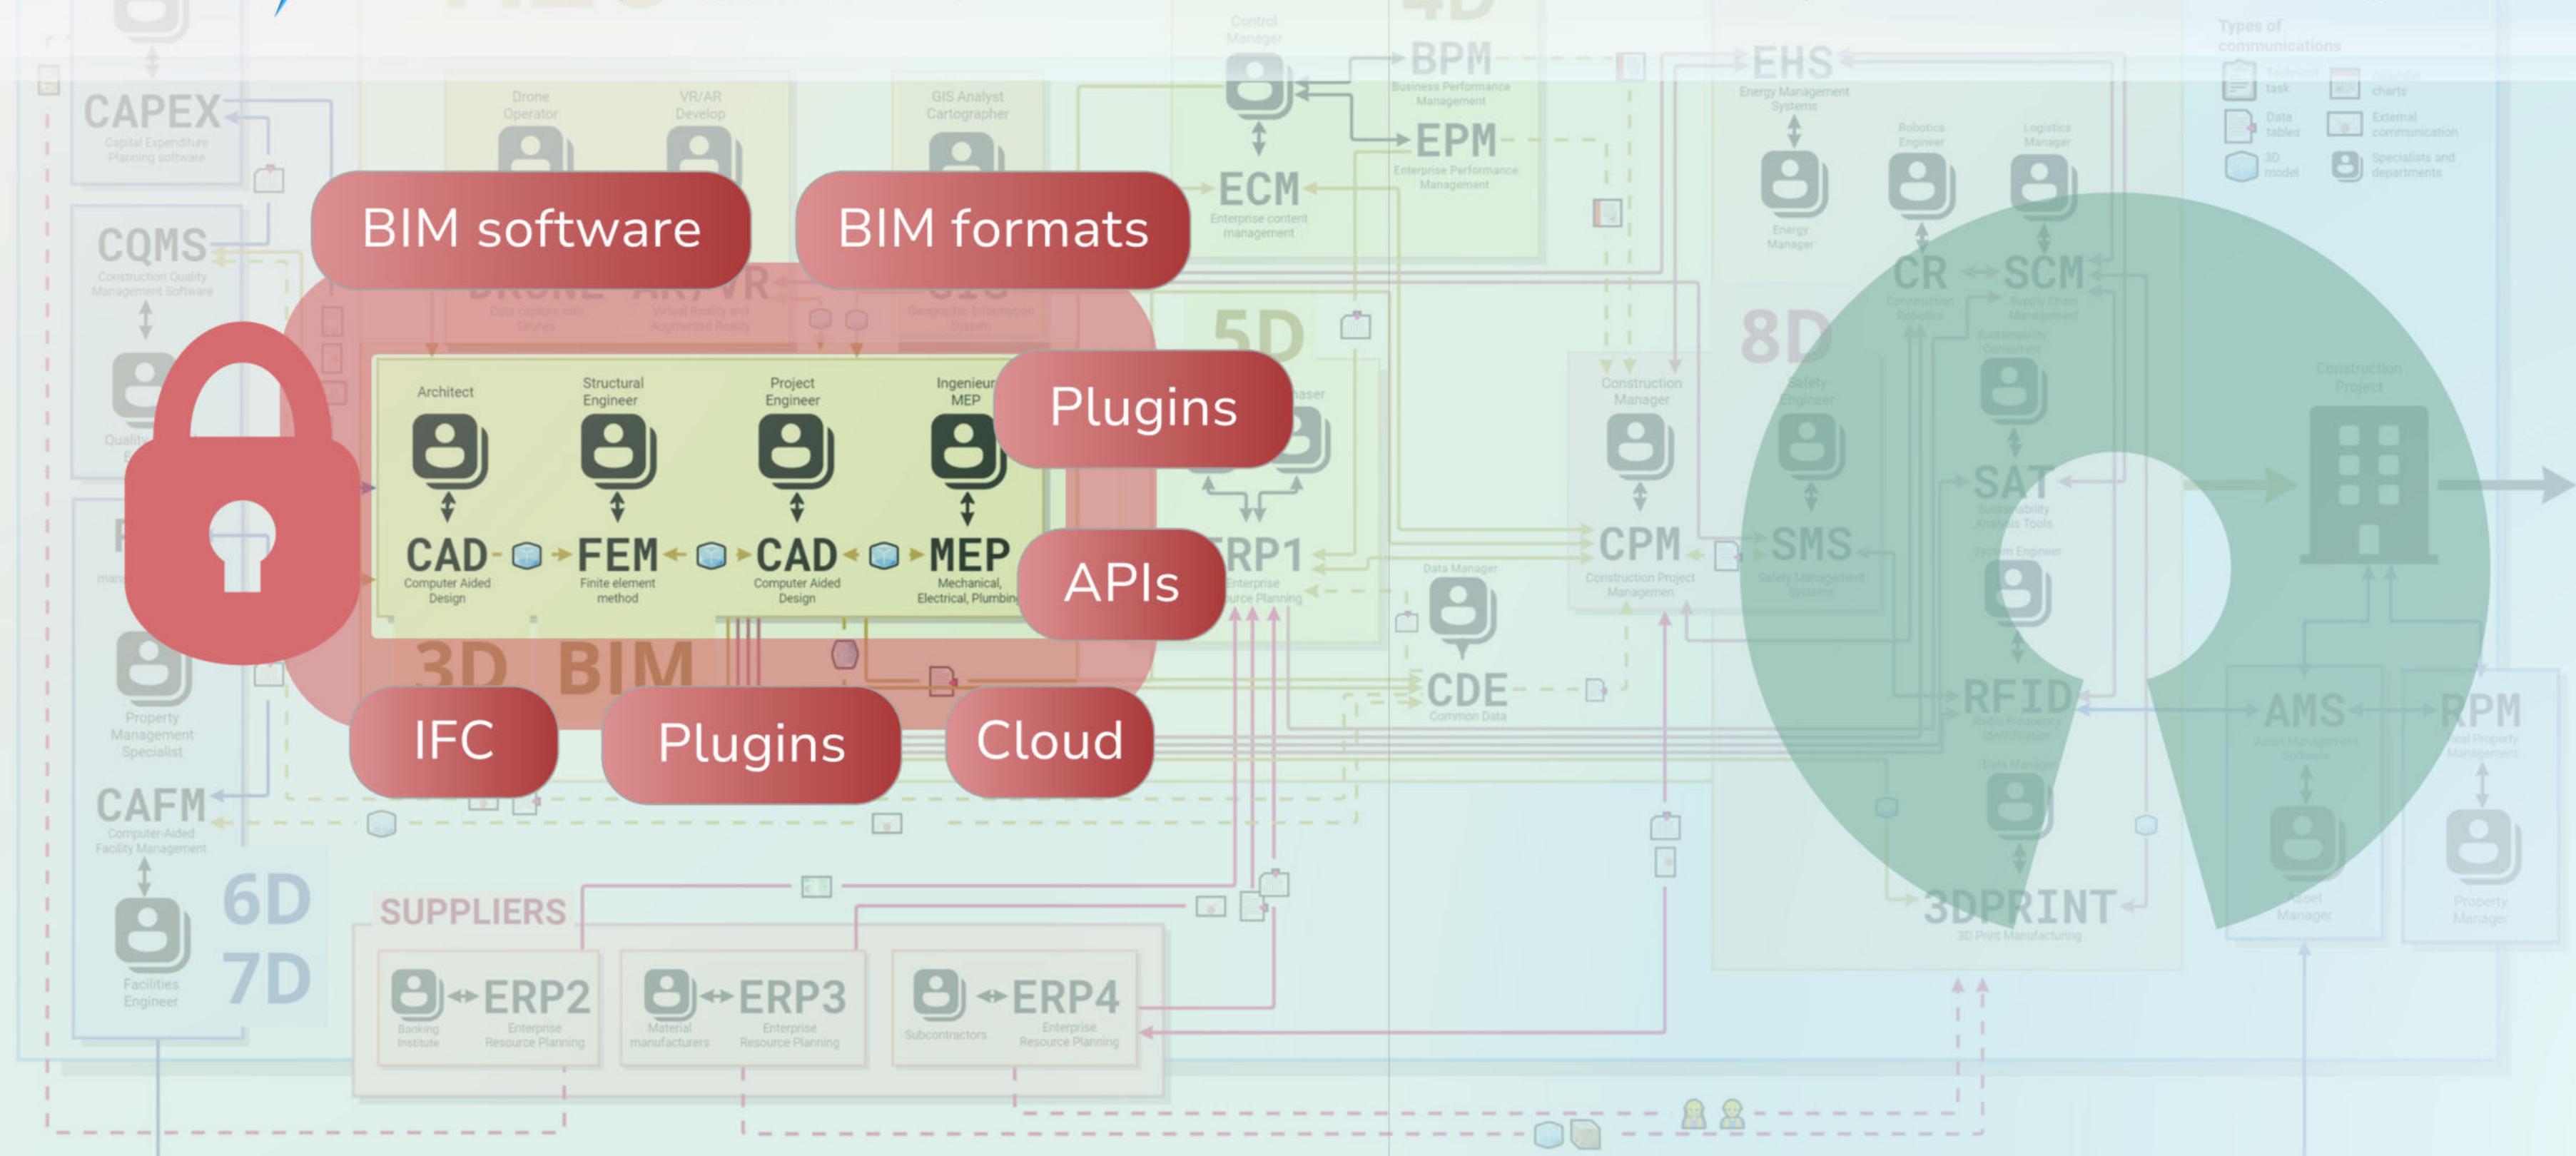

The construction business is filled with a lot of systems and data that need to be connected to each other

# Closed and complex CAD (BIM) formats force users to use complex and expensive tools to access and process data

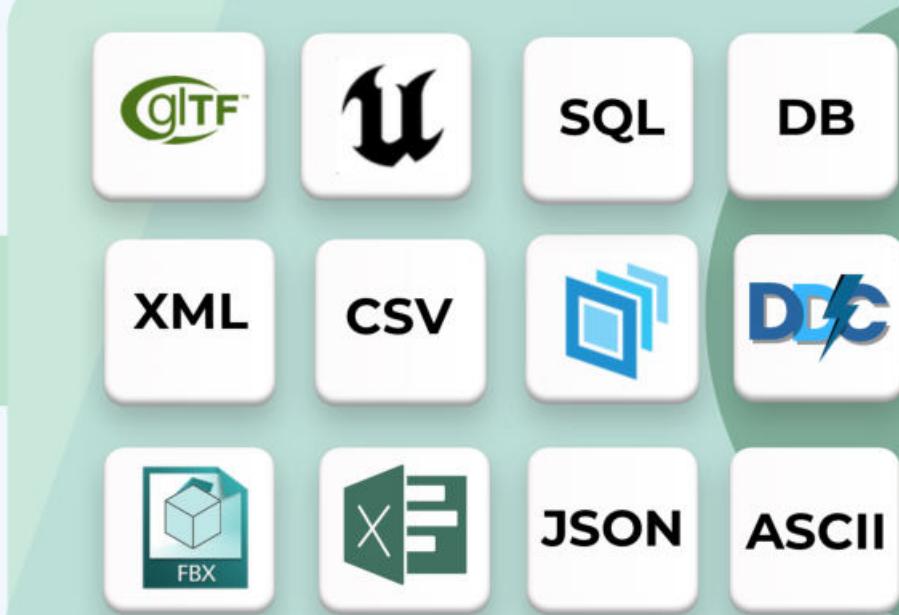

## CLOSED DATA

# CAD (BIM) DATA

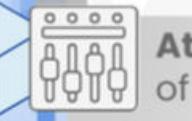

In construction projects, data manipulation begins with the collection of attribute and geometry requirements for project entities. Using parametrized CAD systems, the project is populated with data on the geometric parameters of the entities, which allows to confirm volumes and prepare data to be transferred to systems for handling the attribute parameters of the project entities.

interoperability

Autodesk 2020s

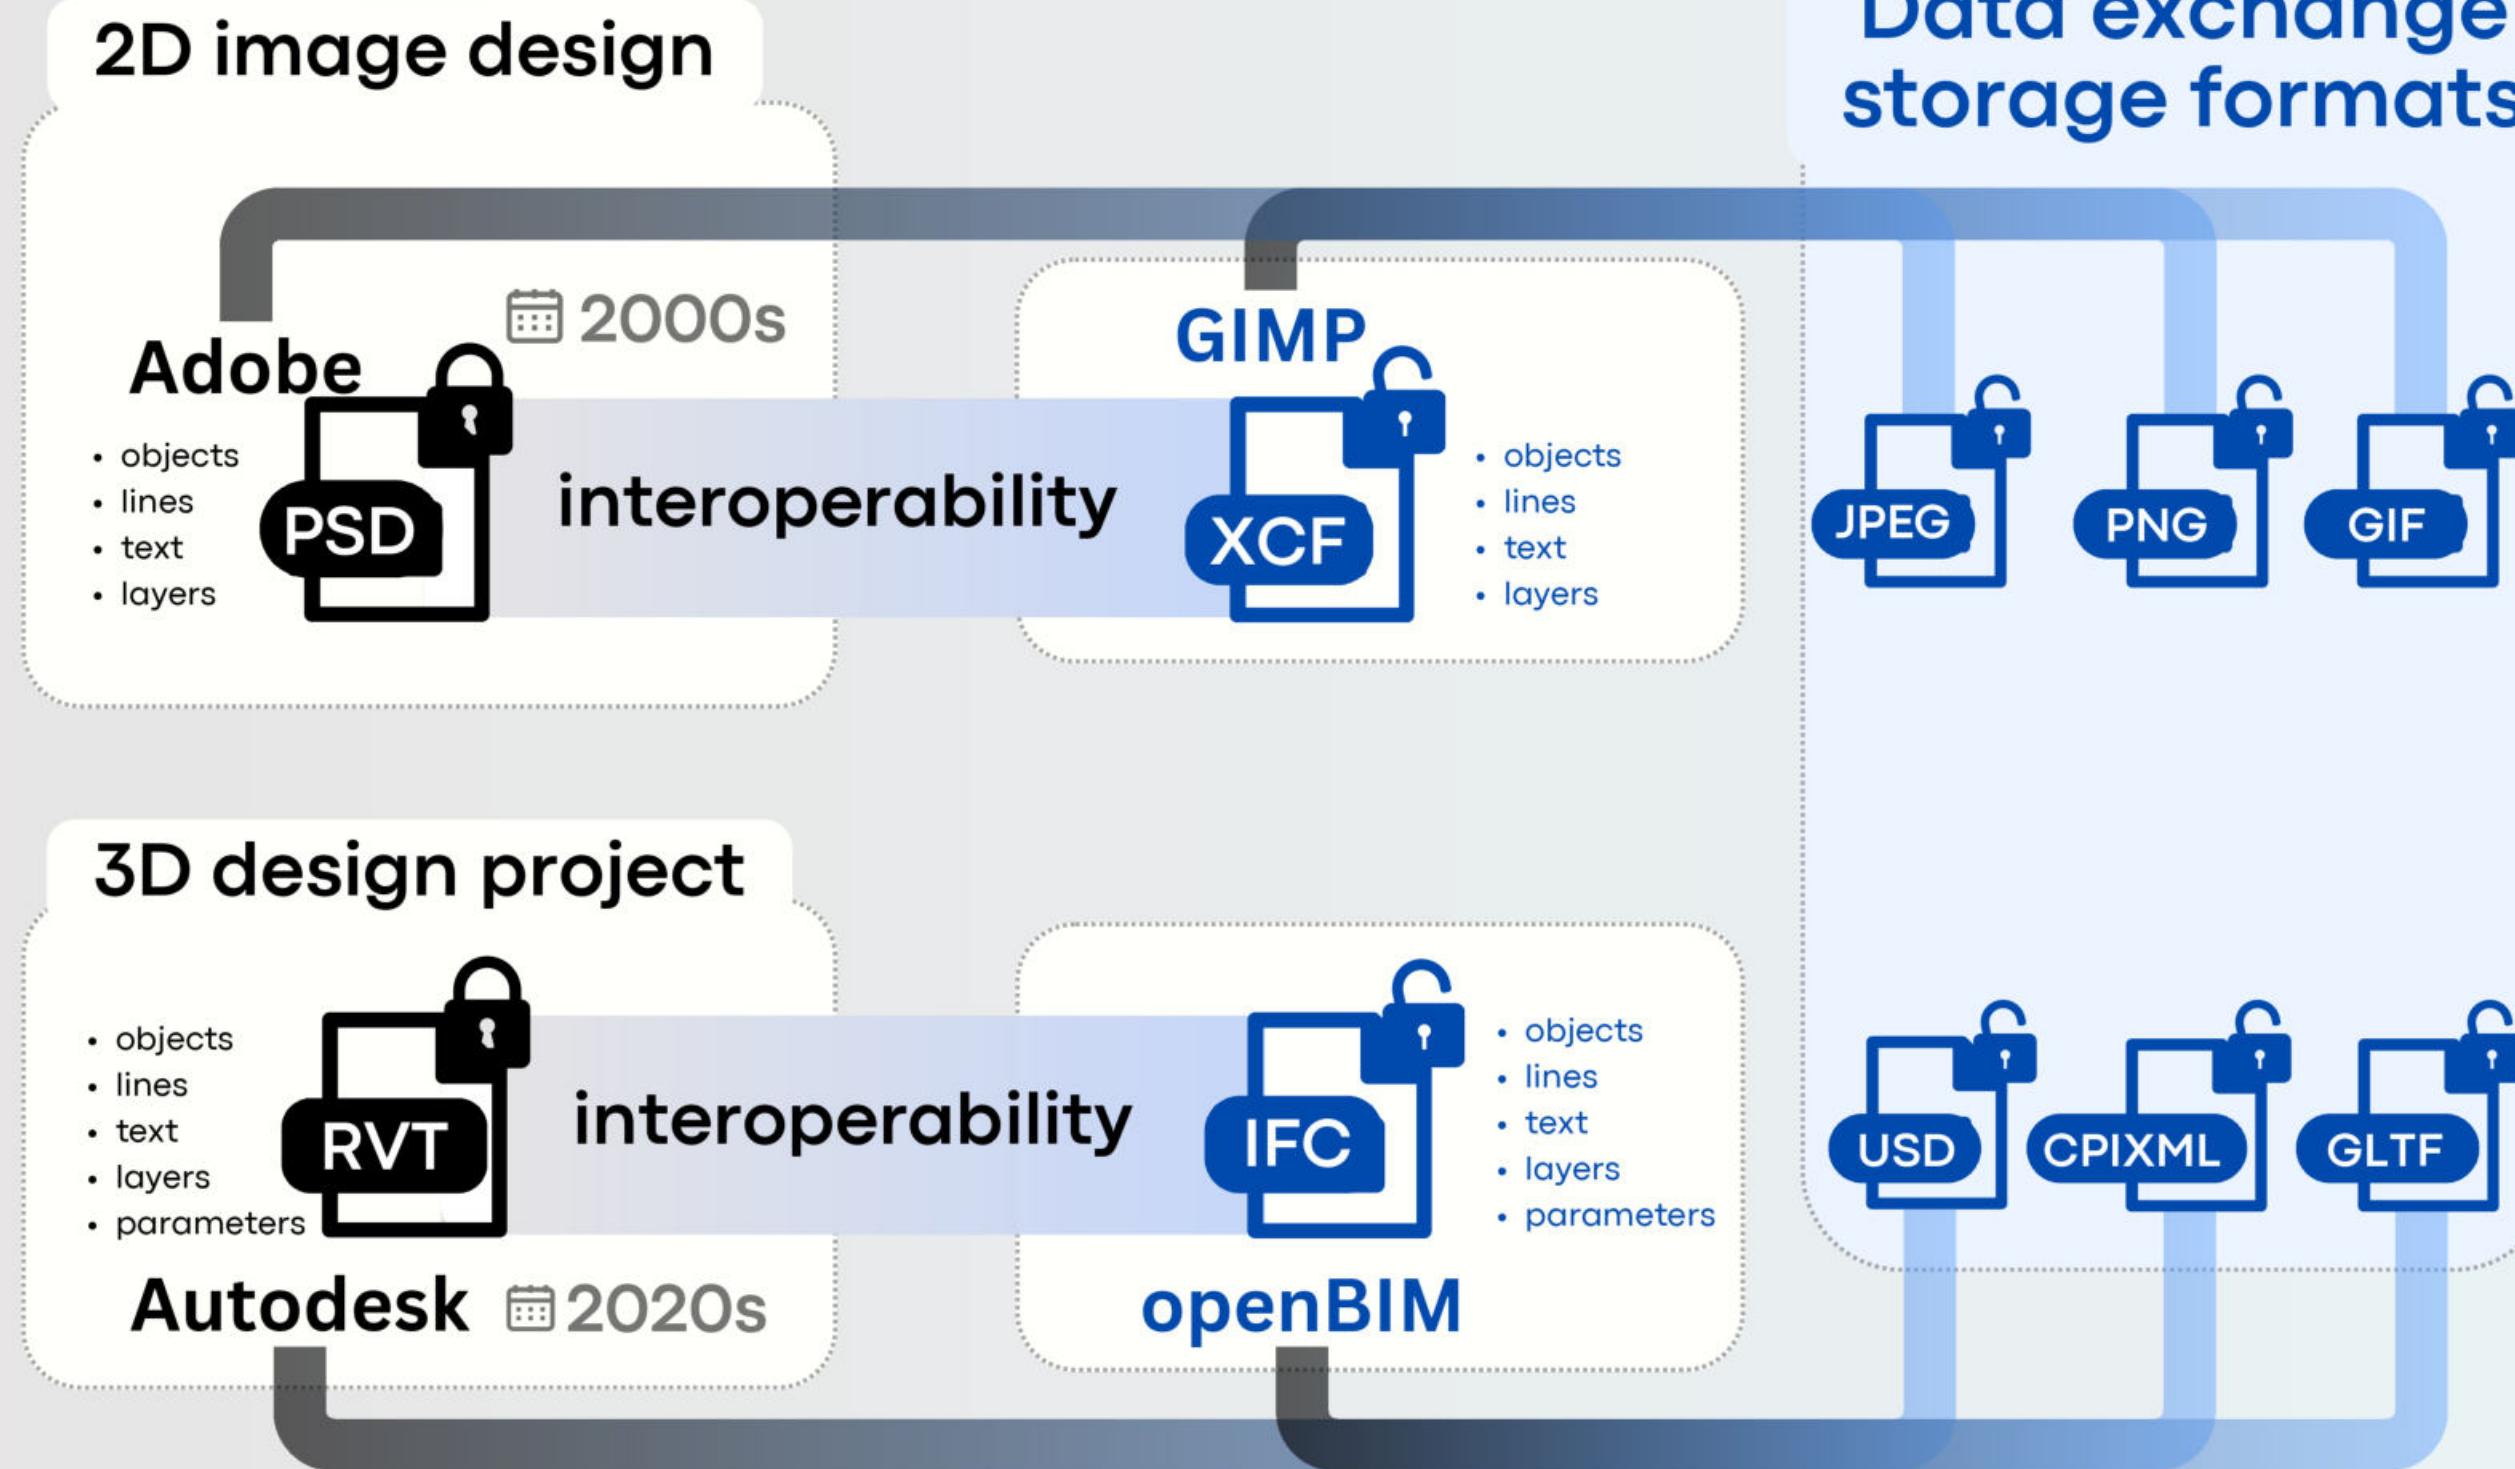

openBIM

The **interoperability of data formats** in construction is similar to the path from trying to combine Photoshop and GIMP in the 2000s to the similar goal of combining closed CAD (BIM) tools with open and semi-open solutions in the 2020s.

# Interoperability and data formats

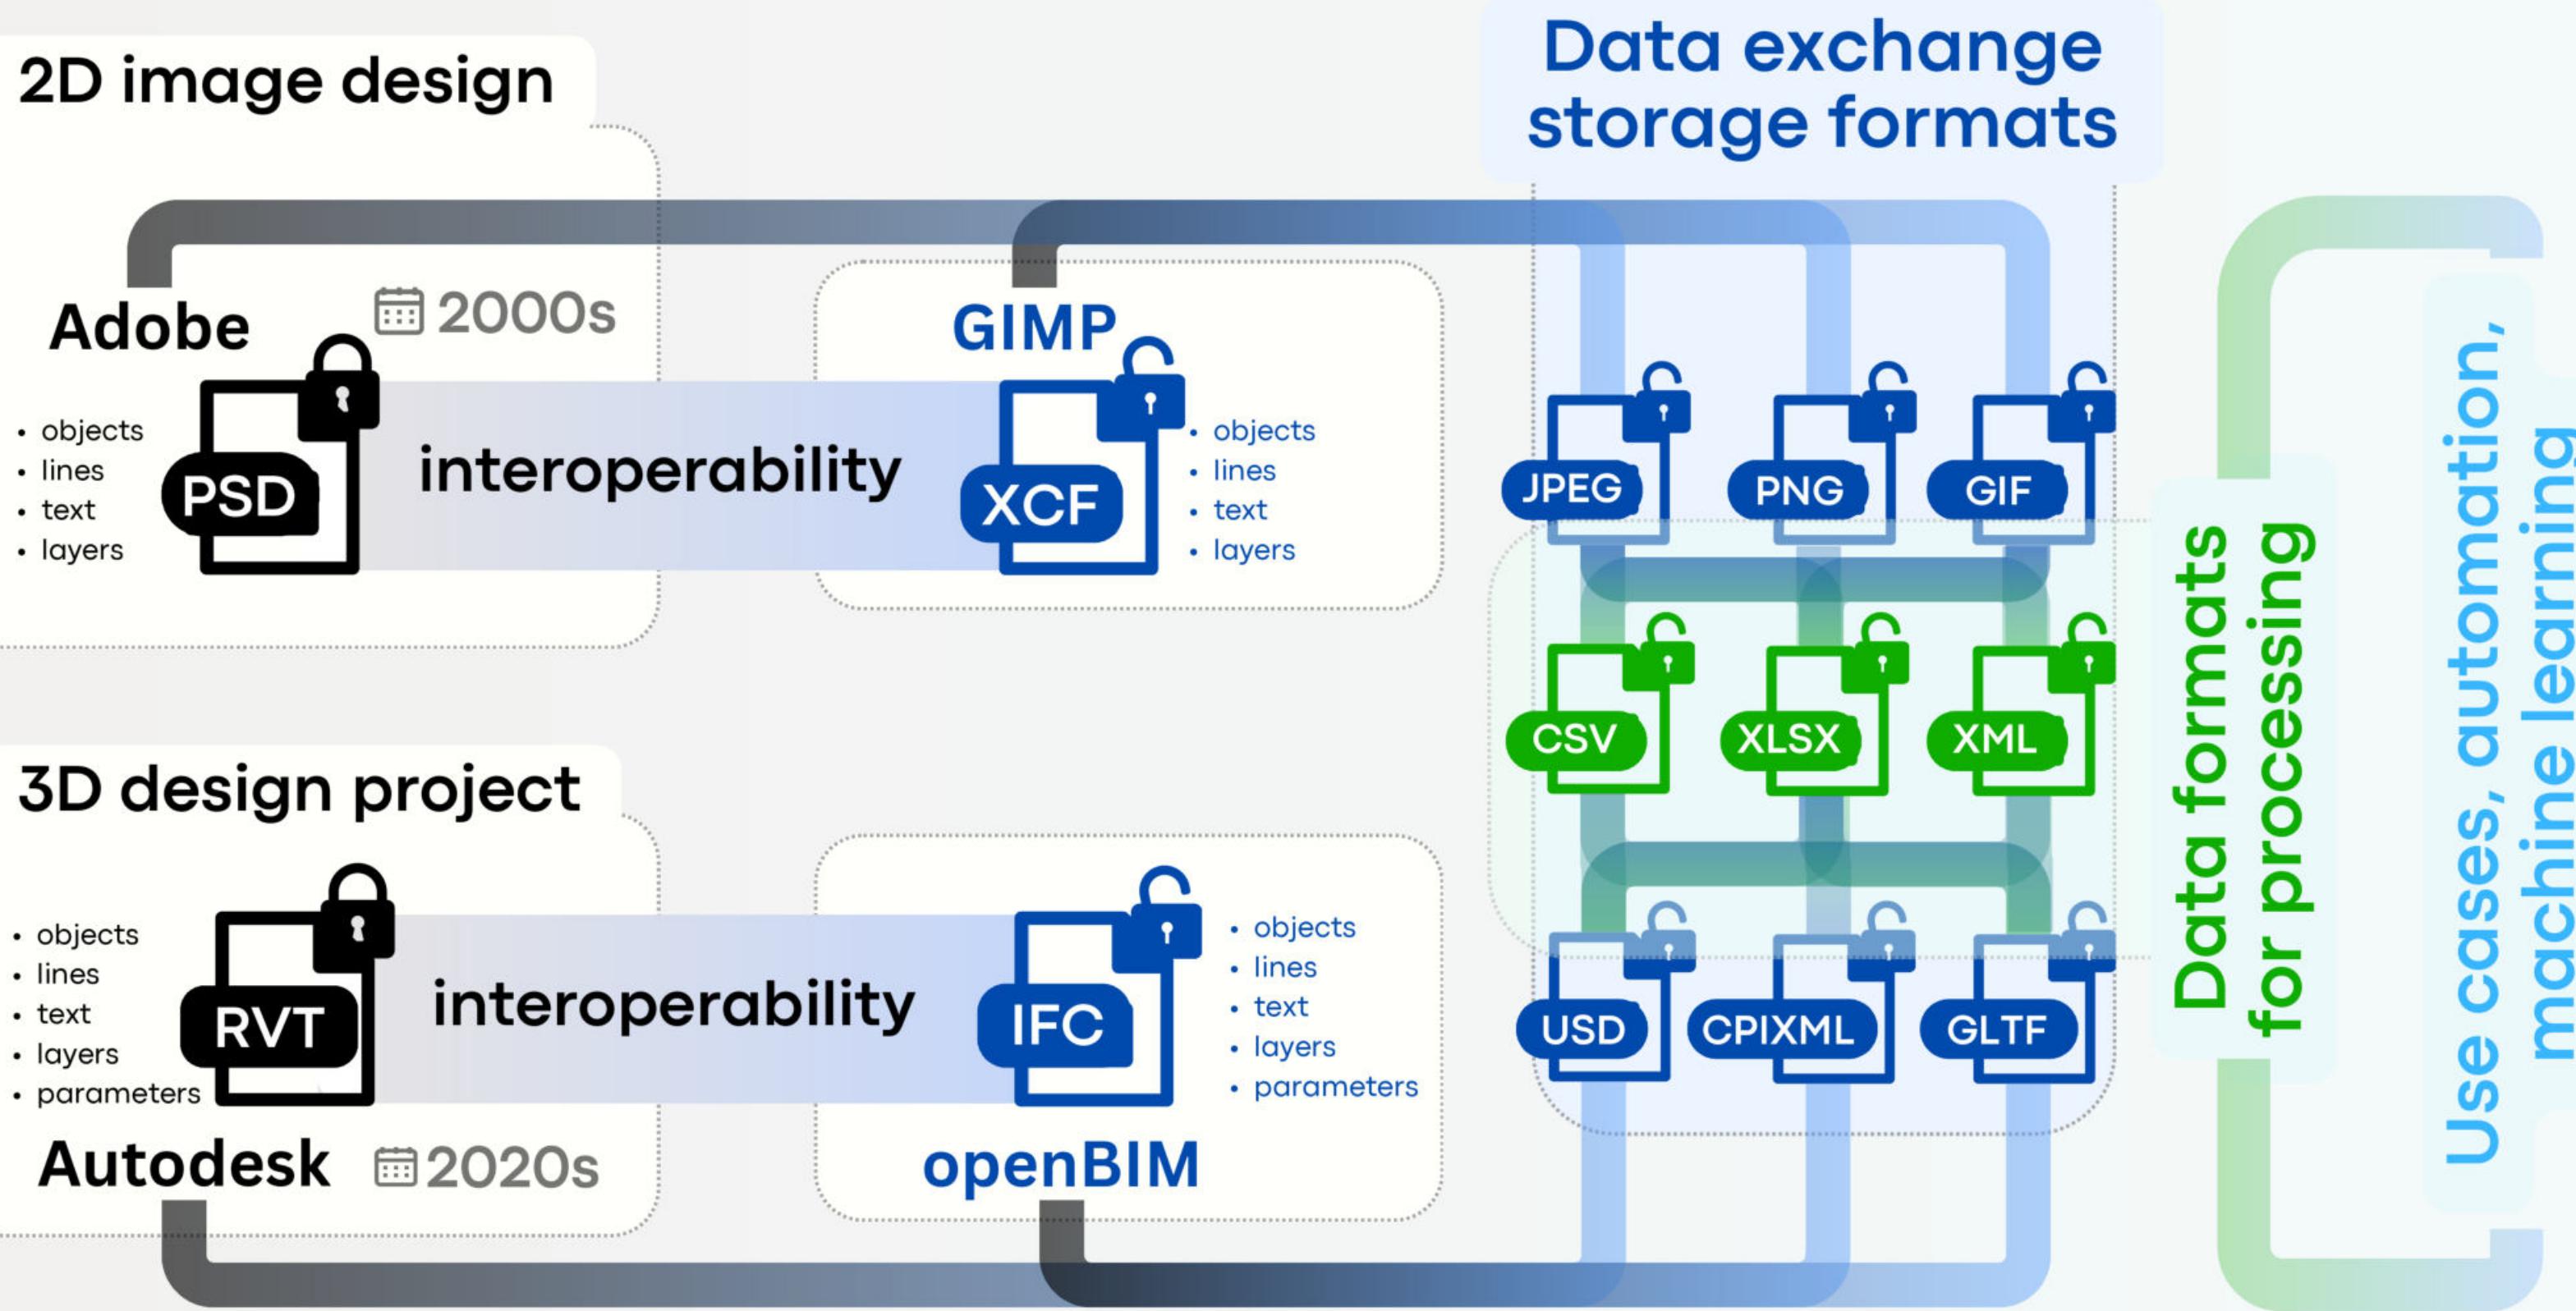

data-driven  
construction.io

Users, however, wanted simple solutions - flat and accessible data. They were not interested in redundant layer logics and parameters.

# Converter with UI

Conversion from CAD (BIM) formats in two clicks

# Converter

## terminal version

Hundreds of applications allow you to embed the conversion process into your use cases

# From multi-format CAD (BIM) data into a structured format 😊

```
 1 import os, subprocess  
 2  
 3 # Folder where the DDC converter is located  
 4 path_conv = r'C:\DDC_Revit_Community\datadrivenlibs\\'  
 5 # Path address RVT | IFC | DWG project are located  
 6 file_path = r'C:\DDC\rstadvanced_sample.rvt'  
 7  
 8 # Conversion of one RVT project  
 9 process = subprocess.Popen([os.path.join(path_conv,  
10 'RvtExporter.exe'), file_path], cwd=path_conv)  
11  
12 print("DDC Conversion process finished")
```

## DATA CONVERSION TO OPEN FORMATS

conversion in just 4  
lines of code

data**driven**  
construction.io

```

1 # RVT | IFC | DWG project file name in XLSX format
2 output_file = file_path[:-4] + "_rvt.xlsx"
3 # Read the converted Excel file
4 df = pd.read_excel(output_file)
5 # Update column names to remove storage type in parameter
6 df.columns = [col.split(' : ')[0] for col in df.columns]

```

two-dimensional  
project data

data-driven  
construction.io

🚀 Structured format is ideal  
for analytics, visualization  
and automation

## FILTER

Input

Filtering data in Revit and IFC projects.py

```
1 # Whether each element contains the values
2
3 df[df['Category'].isin(['Wall', 'Window'])]
```

Output

|   | <b>Id</b> | <b>Category</b> | <b>Type</b>  | <b>Length</b> | <b>Volume</b> |
|---|-----------|-----------------|--------------|---------------|---------------|
| 0 | 12577     | Wall            | Wall WD100   | 3200          | 1.0           |
| 1 | 15889     | Wall            | Wall STB 200 | 5400          | 6.0           |
| 3 | 74456     | Window          | Window 1700w | 1700          | 0.5           |

## GROUP

Input

GroupBy Revit IFC.py

```
1 # Grouping a Revit or IFC project by parameters
2
3 df.groupby('Category')['Volume', 'Length'].sum()
```

Output

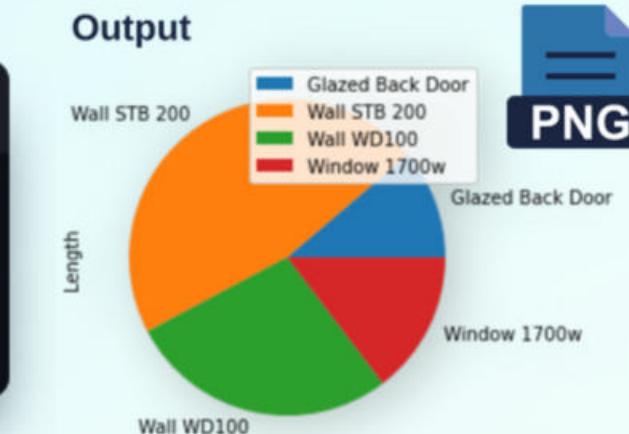

| Category | <b>Volume</b> | <b>Length</b> |
|----------|---------------|---------------|
| Door     | 0.3           | 1300          |
| Wall     | 7.0           | 8600          |
| Window   | 0.5           | 1700          |

# PIE chart

Input

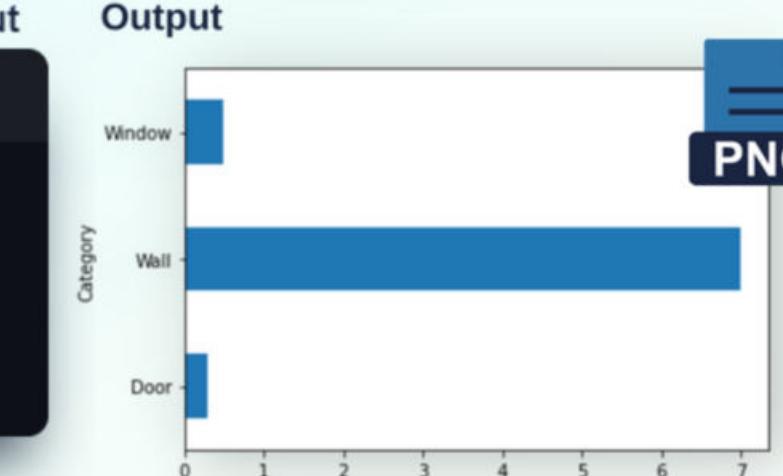

```
- □ × ⚙ Pie chart.py  
1 # Create a basic pie chart  
2  
3 df.groupby(['Type']).sum().plot.pie(y='Length')
```

# BAR chart

Input

```
- □ × ⚙ Bar plot.py  
1 # The bar plot can be created as follows  
2  
3 dfp = df.groupby('Category')['Volume'].sum()  
4 dfp.plot(kind='barh')
```

# Regular Expression

Input

```
- □ × ⚙ RegEx.py  
1 #Regular expression in Revit and IFC  
2  
3 df[df['Category'].str.match('Wal*')]
```

Output

|   | ID    | Category | Type         | Length | Volume | grid icon |
|---|-------|----------|--------------|--------|--------|-----------|
| 0 | 12577 | Wall     | Wall WD100   | 3200   | 1.0    |           |
| 1 | 15889 | Wall     | Wall STB 200 | 5400   | 6.0    |           |

## QTO TakeOff

Input

```
- □ x QTO by RegEx.py  
1 #QTO - Finding volumetric quantities for the group  
2  
3 dfq = df[df['Category'].str.match('Wal*')]  
4 dfq = dfq.groupby('Category')['Volume', 'Length'].sum()
```

Output

Volume Length

Category

| Category | Volume | Length |
|----------|--------|--------|
| Wall     | 7.0    | 8600   |

## EXCEL Data Export

Input

```
- □ x Export to Excel.py  
1 # Creating a grouping and saving as Excel  
2  
3 dfe = df.groupby(['Category'])['Length'].agg(['sum', 'count'])  
4 dfe.to_excel("output.xlsx", sheet_name='Category_estimate')
```

Output

|   | A      | B    | C | D |
|---|--------|------|---|---|
| 2 | Door   | 1300 | 1 |   |
| 3 | Wall   | 8600 | 2 |   |

## FILTER

Input

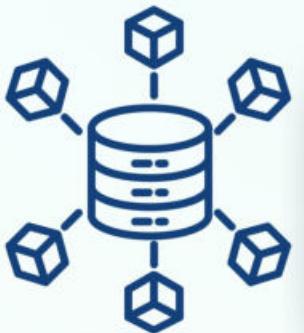

```
- □ × Filtering data in Revit and IFC projects.py
  1 # Whether each element contains the values
  2
  3 df[df['Category'].isin(['Wall', 'Window'])]
```

Output

|   | Id    | Category | Type         | Length | Volume |
|---|-------|----------|--------------|--------|--------|
| 0 | 12577 | Wall     | Wall WD100   | 3200   | 1.0    |
| 1 | 15889 | Wall     | Wall STB 200 | 5400   | 6.0    |
| 3 | 74456 | Window   | Window 1700w | 1700   | 0.5    |

Filter the data in the project to keep the wall category items in the project

## GROUP

snappyIO

Input

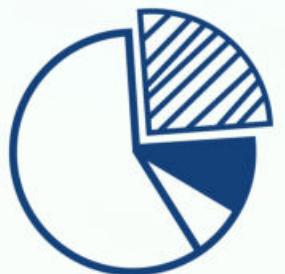

```
- □ × GroupBy Revit IFC.py
  1 # Grouping a Revit or IFC project by parameters
  2
  3 df.groupby('Category')['Volume', 'Length'].sum()
```

Output

|          | Volume | Length |
|----------|--------|--------|
| Category |        |        |
| Door     | 0.3    | 1300   |
| Wall     | 7.0    | 8600   |
| Window   | 0.5    | 1700   |

Group the project by the "Type Name" parameter and show the volume of each group

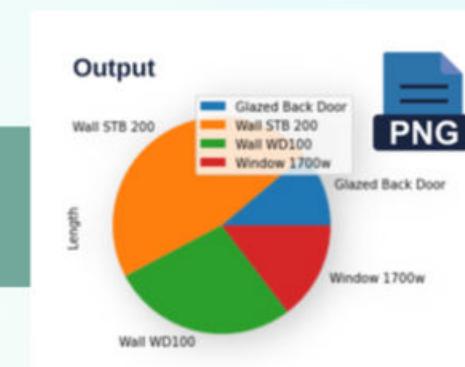

## PDF

snappyIO

Input

```
- □ × Creating a PDF document.py
  1 from fpdf import FPDF
  2
  3 # Determining the volumetric characteristics of the group
  4 s_cat = 'Window'
  5 dfq= df[df['Category'].str.match(s_cat)]
  6 dfq = dfq.groupby('Category')['Volume', 'Length'].sum()
  7 cat_len = str(dfq.iloc[0]['Length'])
  8 cat_vol = str(dfq.iloc[0]['Volume'])
  9
 10 # Creating a PDF document based on the parameters found
 11 pdf = FPDF()
 12 pdf.add_page()
 13 pdf.set_font('Arial', 'B', 16)
 14 pdf.cell(190, 8, 'Category: ' + s_cat, 2, 1, 'L')
 15 pdf.set_font('Arial', '', 14)
 16 pdf.cell(190, 8, 'Sum of volumes: ' + cat_vol, 2, 1, 'L')
 17 pdf.cell(190, 8, 'Sum of lengths: ' + cat_len, 2, 1, 'L')
 18
 19 # Saving a document in PDF format
 20 pdf.output('c:\Report_DataDrivenConstruction.pdf', 'F')
```

Choose the first 20 types by volume and show the result as a Pie chart

Create a PDF report with a table and a graph

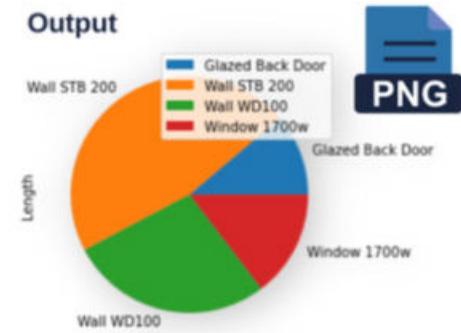

Output

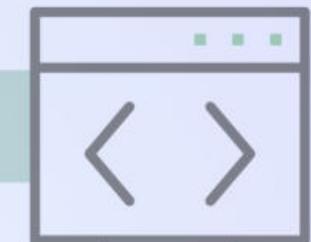

|   | ID    | Category | Type         | Length | Volume |
|---|-------|----------|--------------|--------|--------|
| 0 | 12577 | Wall     | Wall WD100   | 3200   | 1.0    |
| 1 | 15889 | Wall     | Wall STB 200 | 5400   | 6.0    |

Comparison of the cost of automating the tasks of extracting data from construction projects

# Use case Data quality and automatic checks

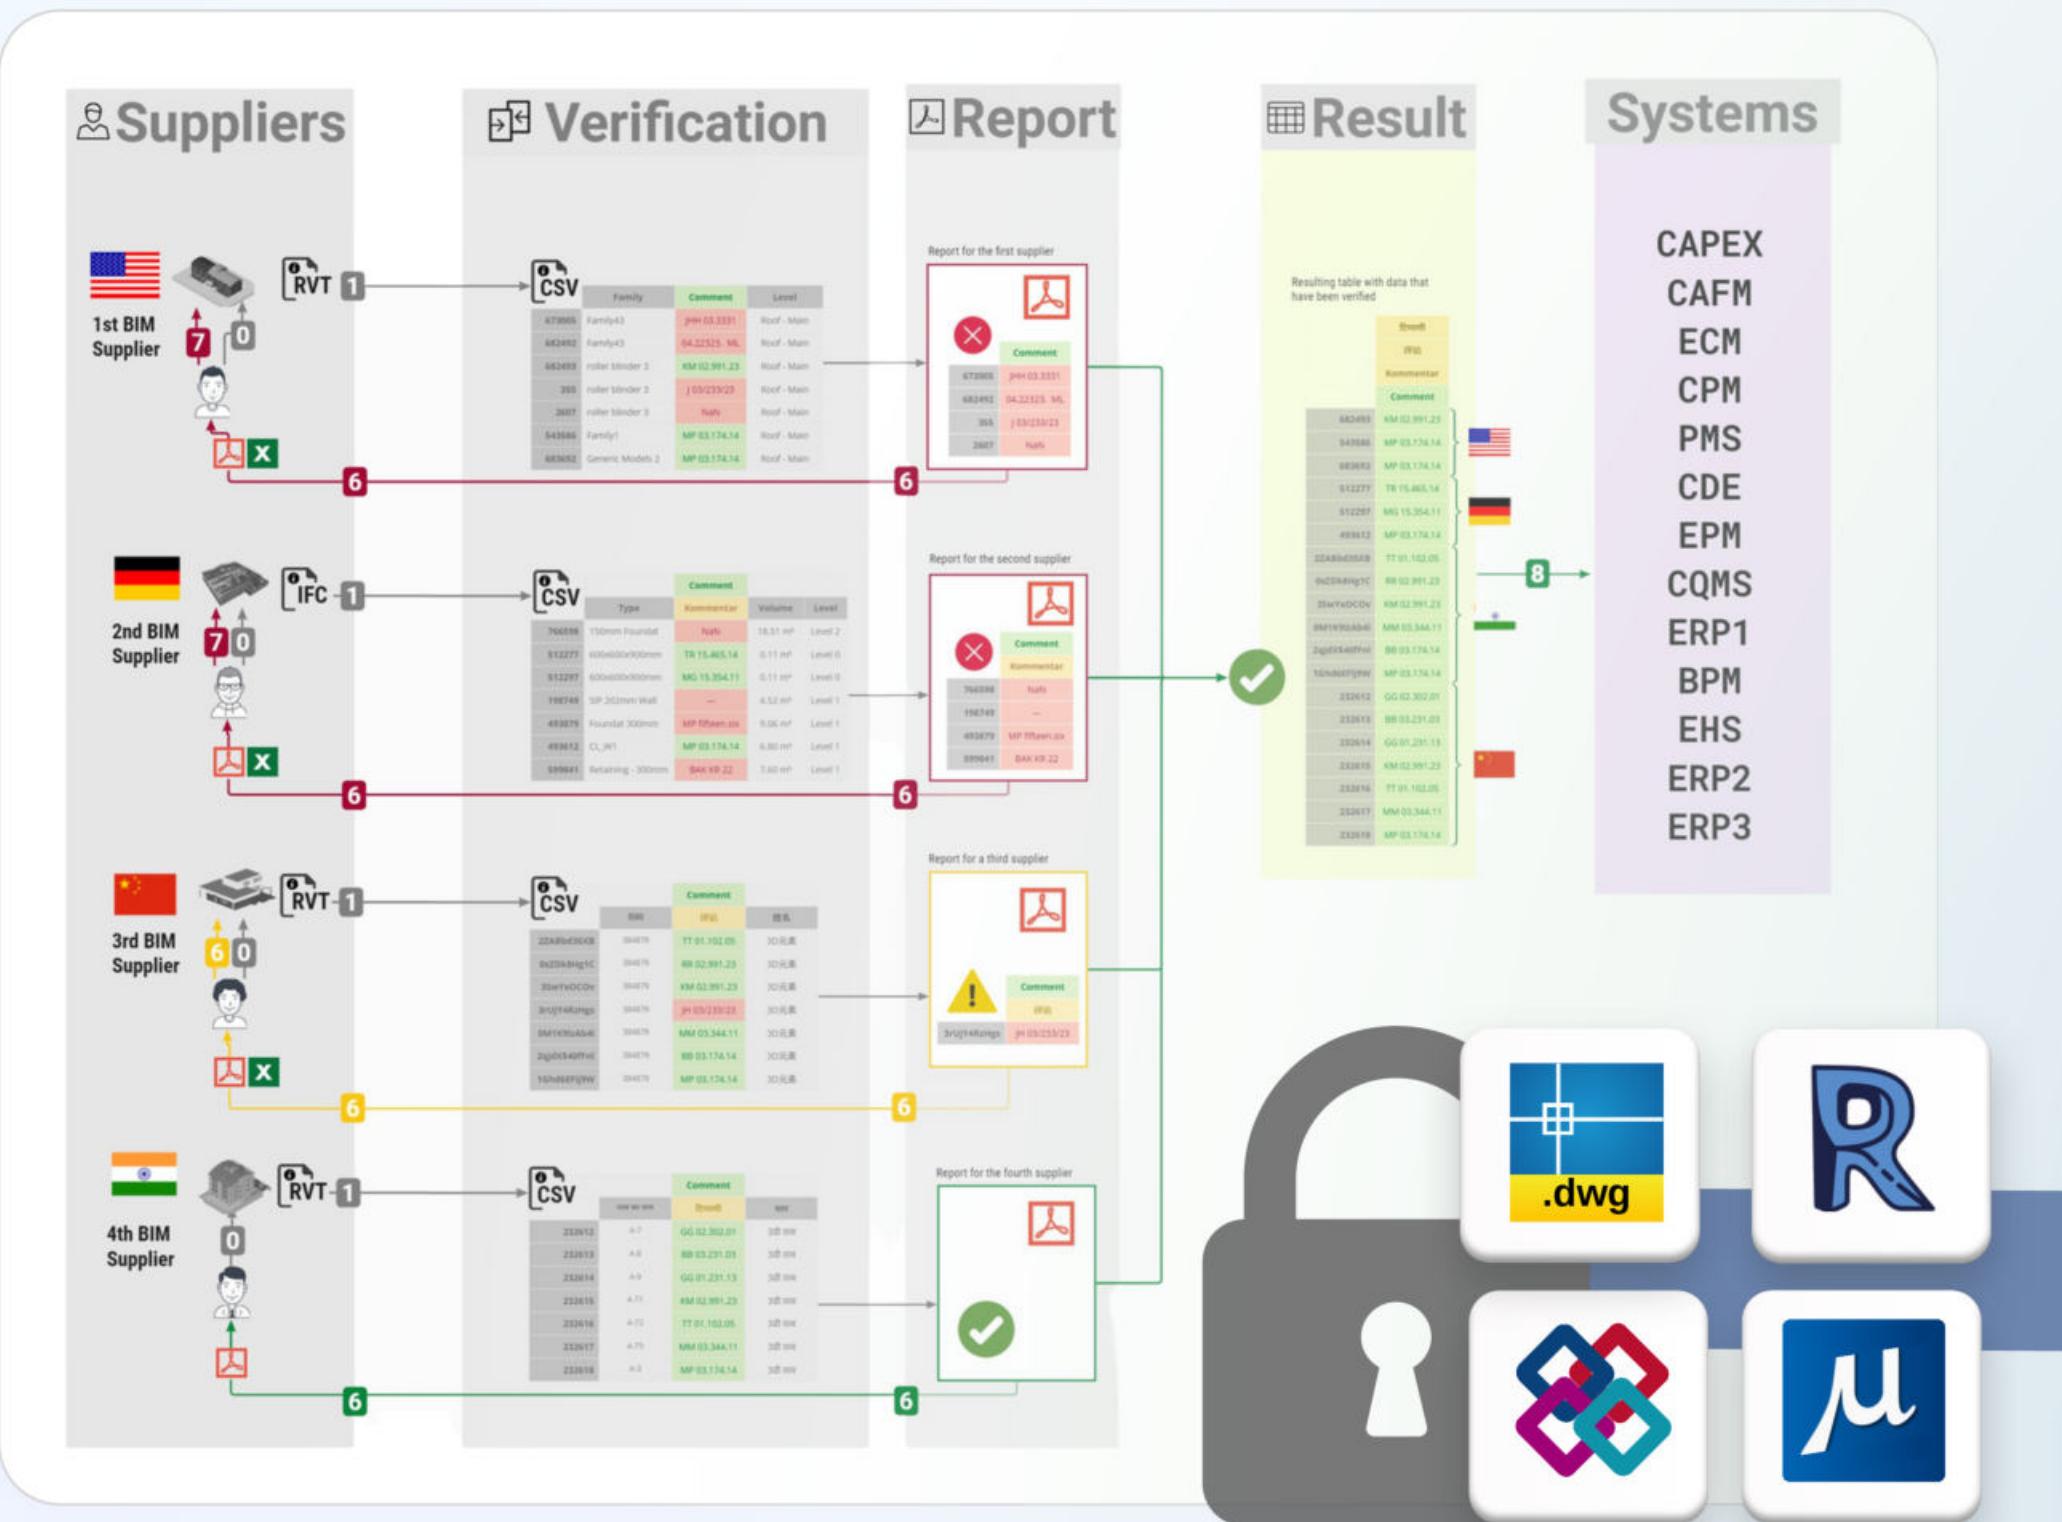

The screenshot displays a comprehensive dashboard for managing BIM data. At the top, there's a table view showing detailed information for multiple objects, likely熊脚 (bearings), including their type, dimensions, and material properties. Below this, several charts provide statistical insights: a pie chart showing the distribution of different object types; a bar chart showing the volume of various components; and a histogram-like chart showing the distribution of some metric across objects. A table below these charts provides specific data points for each category. The interface includes sections for 'data-driven construction.io' and 'openBIM', suggesting integration with industry standards. On the left, there are icons for a lock, DWG files, R programming language, and the openBIM logo.

Compiling documentation from BIM model data in Revit and IFC formats ranks among the most labor-intensive tasks for managers

## Benefits of automated documentation:

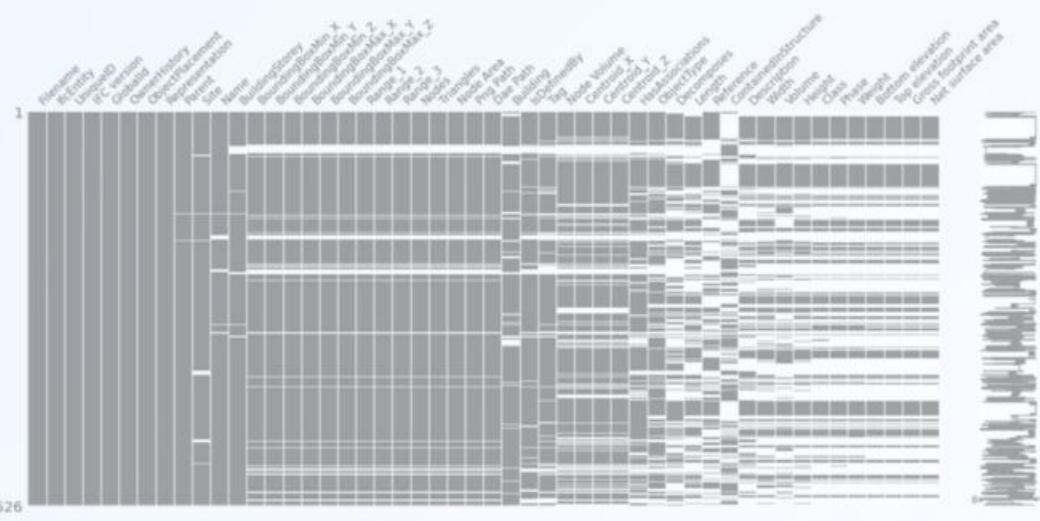

- Consistency
- Efficiency
- Accuracy
- Scalability
- Time Savings
- Up-to-date
- Customization
- Cost-Efficiency
- Traceability
- Adaptability

# Use case Automatic reporting for BIM model

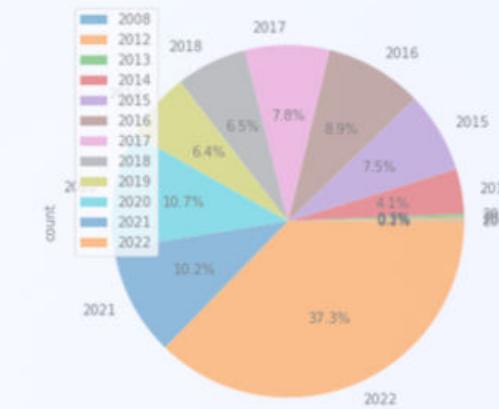

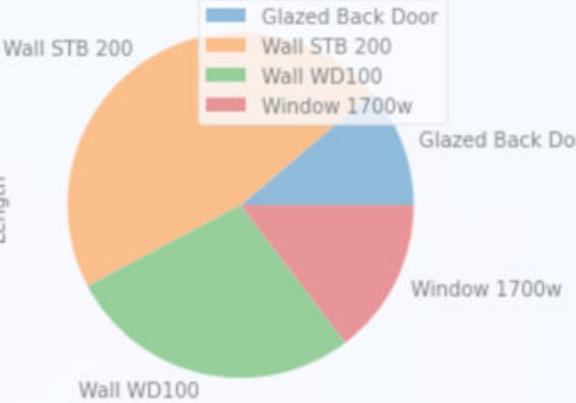

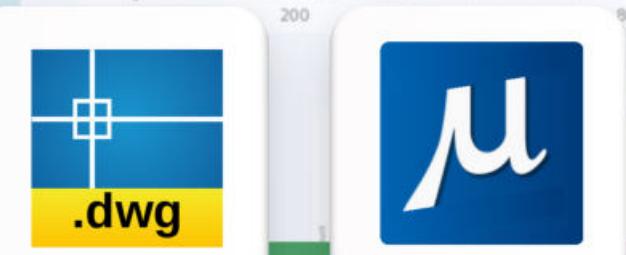

Automated validation, utilizing logic and code, empowers a company to efficiently and accurately process 100s of files at once, ensuring consistent quality while reducing costs and human errors

**data-driven  
construction.io**

## Use case Data visualisation of project data

Tools for working and processing  
project data in Revit™ and IFC formats

## What We Offer

### Customized Data Strategies

Tailored solutions for data collection, management, and analysis that fit your specific project requirements

### CAD Conversion and Integration

Streamline your project documentation with our advanced CAD conversion tools, making data easily accessible and usable

### Training and Support

Empower your team with the knowledge to leverage BIM data, enhancing productivity and innovation
